

≈ LARGER FRONT LOADER BOOSTS CAPACITY IN SAME FOOTPRINT

Huebsch has expanded its washer-extractor product line with the release of the HCN100, a 100-pound front-load washer-extractor with eBoost™ technology for vended laundry owners.

The washer-extractor will allow Laundromat owners to command a higher vend price than smaller-capacity machines, and takes up the same amount of room as an 80-pound machine, the company says.

Featuring the company's eBoost™ technology, the HCN100 uses 33% less electrical energy and 11% less water than two-speed models, the company says, and also includes the patented Water Guardian leak detection feature, which detects leaks in both the drain and fill valves.

Also featured is the company's Galaxy™ 600 control, which allows for multilevel vend pricing, enabling store owners to increase revenue per cycle, while time-of-day pricing helps increase turns during slow times, the company says.

With the feature, customers can also tailor wash cycles for an additional price.

When combined with a card payment system, the control allows customers to ease into vend increases pennies at a time, the company adds.

Store owners can also retrieve machine data via a PDA or laptop with the Galaxy™ 600 control feature.
